

ABSTRACT OF THE DISCLOSURE

A container and method for storing and imparting a scent to an object. The container having an outer layer formed to define an object receiving space and fabricated of a moisture and gas barrier material. The container further having an inner layer having a scent incorporated therein such that, upon an object being disposed in the object receiving space, the scent of the inner layer is imparted to the object while the outer layer serves as a barrier to prevent surrounding objects from being contaminated with the scent.
